

Durability

Long term behaviour

Insensitive against concrete alkalinity. The BFL-Mastix bands confined in the concrete, maintain their capacities during the whole service life of their concrete element.

BFL-Mastix joints have been used in 1990 for the construction of a basin. After the cutting of its walls in the year 2000, because of a change in the use, it was observed that the bands have completely maintained their plasto-elastic properties as well as their adherence capacity.
