

mastix sa

Coherence

Tight connection of various elements

The waterproofing* system developed by Mastix leads to watertightness between the band's gravelcoating and the concrete aggregates.

The liaison **A** between gravelcoating and the core is carried out mechanically and waterproof.

The liaison **B** between the concrete aggregates and the band gravel coating is made with cement and therefore waterproof.

Both liaisons are of the same nature, constitute a coherent entity and are waterproof.

* The waterproof joint allows, that a liquid or a gas cannot escape.
